

CAN YOU HEAR ME?

Materials

2 identical soup cans
pointed tool*
5-foot length of string
toothpick (optional)

Instructions

1. In the bottom of each can, punch a small hole. The hole should be big enough for the string to go through but small enough that it won't fall out when knotted.
2. Insert the string through the hole in one of the cans. Tie a knot and pull string tight. If the knot is not big enough and the string slips through the hole, tie the string around a piece of toothpick to hold the string in place.
3. Repeat step 2 with the remaining can and the other end of the string.

* To avoid injury, parents should help children punch holes with the pointed tool.
